

INFORMATION: RECONDITIONING OF THE WATER PIPE SYSTEM

WHAT WILL HAPPEN?

The water pipe system on Bergsgatan/Amiralsgatan is being reconditioned.

WHY?

The existing water pipe system needs new pipes. There have been leaks and since the pipes are close to the buildings there could be risks of water reaching basements. This reconditioning also secures the water supply.

The Street and Parks Department of Malmö City are also planning to reasphalt Bergsgatan. Therefore we take the opportunity to do our work before this starts.

METHOD

We use a method called relining. This means that we can place new pipes into old pipes, and with this method we only have to dig up parts of the streets. In these parts there are open shafts (holes) in the ground which we refill as soon as we can. Our work is carried out during daytime and we do our best to restore the streets quickly.

PLAN

The work is done in several phases on Bergsgatan/Amiralsgatan. Phase one and two are now completed. At the end of September we move on to our final phases. We start our third phase on the eastern side of Bergsgatan, from the crossroads Spångatan/Bergsgatan up until Fiskartorget. In the final phase we work our way back on the western side of Bergsgatan, from Fiskartorget to Spångatan/Bergsgatan. We expect to finish our work by December 2010.

WHAT DOES THIS MEAN?

During our work, one side of the street is closed for traffic. The other side of the street has two-way traffic. All side streets are affected by our work on Bergsgatan. The streets might close for traffic and there could be problems with parking spaces and drop-off zones for deliveries. To avoid traffic junctions, please try to choose other roads.

We apologize for any inconvenience we might cause you.
